

## Jet-Max Frequently Asked Questions

### **How much is the 737 Jet-Max unit?**

*The setup is available in a variety of ways. We assume some of our customers may already own some of the required items. The price list is located here on our Facebook page and shortly on our JetMax Webpage.*

### **What if I already have hardware like a CH or Saitek yoke, rudder pedals?**

*Absolutely no problem! We anticipated that JetMax customers would already be flying with hardware on their desktop setups. The Accessory line of products was designed with this in mind. We have optional mounting brackets for mounting a yoke. Perhaps you have a PFC JetLiner yoke. Simply keep it connected as you have now and slide it in front of the JetMax device. We totally recommend using CH or Saitek Rudder pedals with your JetMax setup.*

### **How many computers?**

*This is wide ranging. The biggest challenge in the larger setups people see out here can be the computer/software side. The JetMax product pictures you see now are running with one I930 based computer. We have installed two extra video cards and run one output to the 40" LCD you can see, one output to the PFD/ND, one output to the Center EICAS and Standbys, one output feeds the PRO-MX CDU from FDS and the other output can be used for the Lower EICAS. This is the most cost effective way to run the JetMax devices.*

### **Should I network a second computer?**

*Totally an option with merit. If you are running a massive amount of FSX add-ons you might find you are already pushing your computer beyond its limits. Adding a second computer dedicated to the Avionics side of the setup would certainly maximize performance. A second video card installed would allow for the full JetMax experience as well.*

### **Does it ship complete? Kit form?**

*In order to keep pricing in line we will be shipping in kit form. All the required elements are included as described in the package you order. A detailed assembly manual is included with step by step instructions on connecting all the elements. Freight costs drop to a fraction when we can pack smaller and that is a big part of the strategy.*

### **Can I have my JetMax unit assembled for me?**

*Absolutely. Part of the JetMax Sales plan is "Local" distribution. In many cases you can order your JetMax unit from within your own region and discuss optional elements like assembly, computer set up assistance etc. We have selected a fine group of Resellers for the JetMax product line and they are eager to help.*

### **Is it compatible with FSX?**

Yes, FS9 as well. Both FSX and FS9 are used for the "out the window" scenery and the flight modelling provided by MS Flight Sim. As you know, FS9/FSX do not have elaborate PFD/ND setups nor an FMS. This is where you would likely want to look at the more advanced software options. If you are currently flying the default 737 with you can continue to do so but you would be one step away from a far more advanced device.

### **Is it compatible with PMDG NGX?**

We are talking with PMDG and watching for them to release an SDK (info that allows us to connect our hardware with their software). Once this SDK is released we will have a full picture of what is possible and we are hopeful we can connect the JetMax setup with this amazing software package. We are all PMDG fans at FDS btw!

### **What are the dimensions of the JetMax 737 unit?**

The total width of the unit is 44 inches or 111cm. The Depth of the device (full depth with TQ) is

### **Can I have the First Officer side as well?**

The target for JetMax at this time is to cater to the many simmers who are "chained to their desks" and wanting to get into a far more elaborate experience without the space and budgetary requirements. JetMax is a long term commitment from FDS and as we push forward we will certainly develop on what has been started here.

### **Is the throttle unit scale in size?**

Yes! We really wanted to maintain scale as we know that our customers want realism and we will deliver.

### **Can I buy only the throttle? MCP?**

Yes! For the initial production we will be running extra quantities of all the products. We expect to have stock of Throttles, MCP/EFIS etc as we progress. These would all be available from us or one of our valued resellers

### **Can I use Sim-Avionics or Project Magenta?**

For sure! We can interface easily with these software packages and they would really elevate the overall experience.
